ACKNOWLEDGEMENT

"No duty is more than that of returning thanks!"

"Task successful" makes everyone happy. But the happiness will be gold without glitter if we didn't state the persons who have supported us to make it a success.

Success will be crowned to people who made it a reality but the people whose constant guidance and encouragement made it possible will be crowned first on the eve of success.

I would like to show my greatest appreciation to Mr.Devji Chhanga(**Project Guide**). I can't say thank you enough for his tremendous support and help. I feel motivated and encouraged every time I attend his meeting. Without his encouragement and guidance this project would not have materialized.

I would like to acknowledge the Department of Computer Science, K.S.K.V Kachchh University for provide me constant support and help.

ABSTRACT

I am proud to introduce one of the most technically advanced software for school management and administration. My solution not only reduces the manual work and administration hassles but to keeps the goodwill of school growing by maintaining closer relationships with students, staff.

Now days each and every primary as well as secondary schools are working on paper-based work, that's very time-consuming and tedious task. to solve this problem I developed "School Management System" that contain all task and work are done in school, converting all manual work to computerized.

It contain all information regarding student's like General Register, Admission process, Fees, scholarship, Result mark sheet, Leaving Information of student, Employee Registration, Employee Resign, Employee Salary pay slip, Allowance/Tax Updating system etc.

In this system there are two types of user admin and employee means admin is principal, employee means teacher, peon, clerk etc, each and every user has different user rights and limitation Principal having full rights in system whereas employees don't have full rights.

First of all I deeply learn whole manual work of school management like maintaining General register and how actually student admission are to be processed, how HRM or salary pay slip are maintain, how scholarship are calculated based on different category of student, after completing research I visited some high school as well as primary school and start to gather requirements and done analysis on that requirements and finally done all steps of software development life cycle.

"School Management System" Build Under One of the Strong and Secure latest technology of Microsoft Like VB.Net, MS SQL SERVER with latest developer tools like Dev-express.

It'll help you with your daily school management routines and deliver you from your paperwork.

An Introduction to school Management System

- "School Management System" is for Primary as well as secondary ,Higher-secondary school
- ➤ Having aim to reduce manual work, provide time efficiencies, and optimise finances, Encompasses all aspects of academic management and simplifies processes
- > A secure system which safe fee and scholarship transactions and reduce the tedious manual reporting and entry tasks
- Complete integration and end to end automation of financial, academic, administrative and management operations.
- > Time Saving and User-friendly solutions a single click away
- > Single click solutions for many of the time consuming operations like payroll, staff substitution, fee collection etc that saves precious time of the administrative staff.

THE MAIN PRINCIPLES:

SECURITY

- The Security Subsystem supports dividing users into several groups
- Each Group has its own set of rights for viewing or changing data.
- Role base security management
- User creation and privilege setting
- Admin Permission to view, print and Export for Reports
- > Editing And Deleting Data Permission
- Customized Data Export to Pdf, Other formats

THE HIGHEST RELIABILITY

- Data Management System is based on Transactions.
- > Transactional system never allows your data to be lost or corrupted because accidents such as electricity cutting or hardware errors.
- Don't lost your data-Even after deleting it's possible to restore your data.

> Double check before changing- User will be asked twice before the programmer deletes any data.

SIMPLICITY

- Friendly user interface allows you start to work with the programme easily.
- > The Programme will lead you in any your work.
- Multiuser Great Capability

MAJOR MODULES

STUDENT

- > Admission Management
- > School General Register(G.R) Management
- > Fee Acceptance Management
- Scholarship Transaction Management
- ➤ Latest Result and Exam Management

EMPLOYEE

- > Employee Registration System
- > Employee HRM System
- ➤ Latest Allowance /Tax Update System

OTHERS

- Multi-User Registration
- User Log Maintenance
- Data Backup/Restore Utility

- > Class Management
- > Subject Management

STANDARD USER-FRIENDLY REPORTING SYSTEM

- > Student Admission Report
- > Student GR(General Register) Report
- > Student Fees Receipt
- > Student Fees Statement
- > Scholarship Statement
- > Student Result
- ➤ Employee Information Report
- > Employee Salary Report
- > Current User Information Report
- > System Log Info Report
- ➤ Allowance Update Statement
- > Tax Update Statement

PROJECT PROFILE

Project Title	School Management System
Design & Developed By	Chetan J.Khatri,Sem-6 th ,T.Y.Msc(CA & IT)
Clients	 Mrs.V.K.J And V.D.S Highschool, Kotdi-Mahadevpuri, Mandvi-Kachchh G.M.D.C. Highschool Sukhapar-Bhuj-Kachchh Shri Tara Panchayati primary School
	Others
Academic year	2013-2014
Operating System	Windows 7 or above
Project Guide	Mr.Devji D.Chhanga
Project Submitted to	Department of Computer Science of K.S.K.V.KachchhUniversity ,Bhuj-Kachchh

PERFORMACE REQUIREMENTS

1. HARDWARE REQUIREMENTS

Content		Description
Used	HDD	500 GB
	RAM	4 GB
Required	HDD	80 GB
	RAM	512 MB

2. SOFTWARE REQUIREMENT

Content	Description
OS	Windows 7 or above
Database	MS SQL SERVER 2005

3. Tools

Content	Description
IDE	Visual studio 2008
Other controls	Dev-Express V 8.3

FEASIBILITY

Preliminary investigation examine project feasibility, the likelihood the system will be useful to the organization. The main objective of the feasibility study is to test the technical, Operational and Economical feasibility for adding new modules and debugging old running system. All system is feasible if they are unlimited resources and infinite time. There are aspects in the feasibility study portion of the preliminary investigation.

- > Technical Feasibility
- Operational Feasibility
- Economical Feasibility

TECHNICAL FEASIBILITY

In the feasibility study first step is that the organization or company has to decide that what technologies are suitable to develop by considering existing system. Here in this software used the technologies like Visual Studio 2008 and Ms SQL server 2005.

OPERATIONAL FEASIBILITY

Not only must an application make economic and technical sense, it must also make operational sense.

Issues to consider when determining the operational feasibility of a project

Operations Issues		Support Issues	
>	What tools are needed to support	>	What document action will users be
	Operations?		given?
>	What skills will operators need to be	>	What training will users be given?
	trained in?	>	How will change requests be managed?
>	What processes need to be created		
	and/or updated?		
>	What documentation does an		
	operation need?		

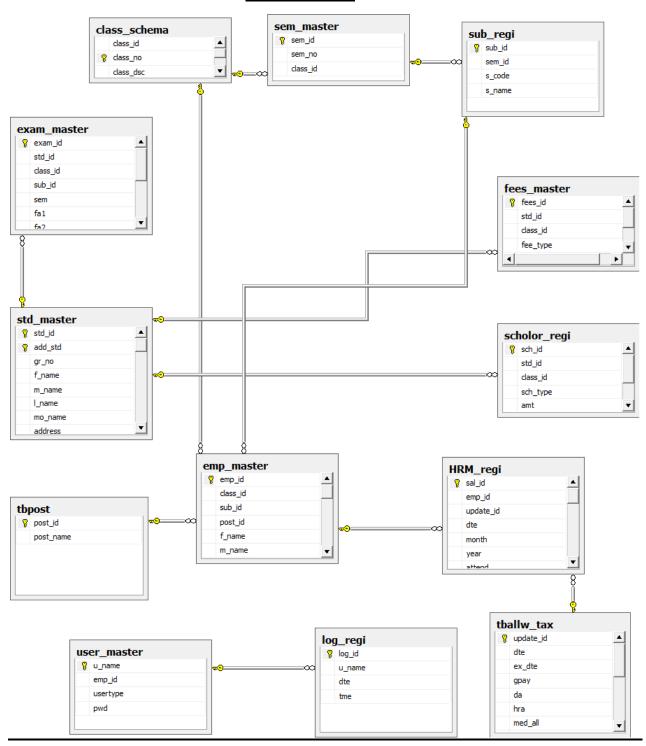

Very often you will need to improve the existing operations, maintenance, and support infrastructure to support the operation of the new application that you intend to develop. To determine what the impact will be you will need to understand both the current operations and support infrastructure of your organisation and the operations and support characteristics of your new application.

ECONOMICAL FEASIBILITY

It refers to the benefits or outcomes we are deriving from the product as compared to the total cost we are spending for developing the product. If the benefits are more or less the same as the older system, then it is not feasible to develop the product.

In the present system, the development of new product greatly enhances the accuracy of the system and cuts short the delay in the processing of birth and death application. The errors can be greatly reduced and at the same time providing a great level of security .Here we don't need any additional equipment except memory of required capacity.
